Changes Since Last Permit Issuance: None – This is a new discharge (Planning was approved on February 1, 2024)

Other Comments: This SRSTP was designed where applicable in accordance with the SFTF Manual, but it does not qualify for the PAG-04 General Permit due to the use of the EC7 treatment system.

The Coco filter treatment system is reportedly capable of BOD5 averages of 10 mg/L and TSS averages of 10 mg/L. This facility is not expected to impact the quality of the receiving stream.

In accordance with the SOP, no water quality modeling was performed since this is an SRSTP.

Proposed Effluent Limitations and Monitoring Requirements

The limitations and monitoring requirements specified below are proposed for the draft permit, and reflect the most stringent limitations amongst technology, water quality and BPJ. Instantaneous Maximum (IMAX) limits are determined using multipliers of 2 (conventional pollutants) or 2.5 (toxic pollutants). Sample frequencies and types are derived from the "NPDES Permit Writer's Manual" (362-0400-001), SOPs and/or BPJ.

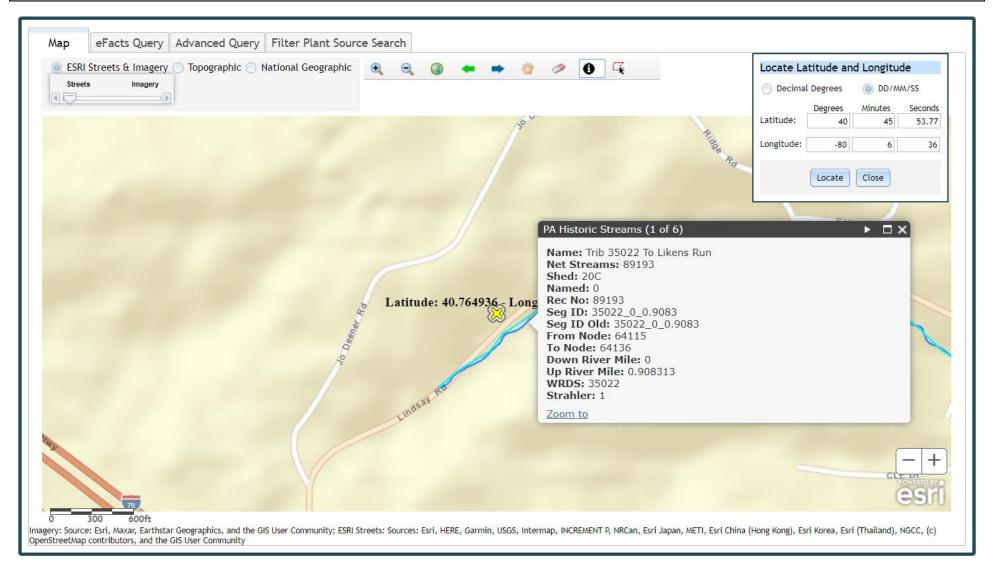

Outfall 001, Effective Period: Permit Effective Date through Permit Expiration Date.
