

FIELD LOG –

Weeks of July 14 and July 21, 2014

- Semi-quantitative fish samples were collected at sites in the lower Susquehanna River and a few of its tributaries, as well as the lower Juniata River at Newport.
- Additional fish surveys are tentatively scheduled for the week of Aug. 11, in the Delaware and Ohio drainages; these will be used as out-of-basin control sites.
- A second round of passive sampler deployment and sediment sampling is scheduled for the coming weeks.
- Unscheduled bacteria sampling is being performed as time permits. Targeted sites include boat launches as well as mid-channel samples.
