

FIELD LOG –

Weeks of April 15 and April 22

Continue to implement the 2013 PROPOSED
SUSQUEHANNA RIVER SAMPLING PLAN:

- *Biologists continue to delineate sites and conduct discrete water quality transects at Marietta and Harrisburg*
- *New sites were delineated on the Susquehanna River at Clemson Island, Browns Island, Sunbury, and Danville. One new site was delineated on the West Branch Susquehanna River at Lewisburg.*
- *The first round of algae sampling has been completed for small, warm, and nutrient rich streams in the south-east part of the state.*
- *Data loggers have been deployed in Juniata River tributaries. Algae sampling is tentatively scheduled for these tributaries in two weeks.*

- *The Fish and Boat Commission, DEP and USGS have collected additional adult smallmouth bass at Wyalusing Creek and Chillisquaque*
