

FIELD LOG –

Weeks of May 13 and May 20

Continue to implement the 2013 PROPOSED
SUSQUEHANNA RIVER SAMPLING PLAN:

- *Biologists continue to conduct discrete water quality transects throughout the basin.*
- *New out-of-basin control sites were delineated on the Delaware River at Morrisville, the Allegheny River at Franklin, and the Youghiogheny River at Sutersville*
- *The first round of sediment sampling has been completed at nine sites throughout the Susquehanna River basin and at three out-of-basin sites*
- *Non-wadable fish sample reaches are being delineated in anticipation of sampling in early June.*
- *Wadable fish sampling on select tributaries will begin in late June.*

- *On May 20, DEP Division of Water Quality Standards welcomed aboard two additional interns. DEP interns will be instrumental in assisting with completing work on the river this summer.*
