

FIELD LOG –

Weeks of May 27 and June 3

Continue to implement the 2013 PROPOSED
SUSQUEHANNA RIVER SAMPLING PLAN:

- *Biologists continue to conduct discrete water quality transects throughout the basin from Marietta on the lower main stem to Newton Hamilton on the Juniata River; to Karthaus on the West Branch Susquehanna River; and to Danville on the upper main stem of the Susquehanna River.*
- *Flows on the Juniata River have begun to decrease to summer-like condition. Flows on the lower mainstem of the Susquehanna River are decreasing but are not nearing typical low-flow conditions.*
- *DEP and the Susquehanna River Basin Commission have completed non-wadable fish sampling on the Susquehanna River at Harrisburg and on the Juniata River at Newport and at Lewistown Narrows*
- *DEP has also completed mussel sampling at select locations on the Susquehanna and Juniata Rivers*

- *Wadable fish sampling on select tributaries will begin in late June.*
